

Poster Preparation Instructions:

- Available area is 40" x 30" (1.01 m x 0.76 m). Your poster should not be bigger than this area. It is possible to use this area in landscape or portrait orientations.
- The title of your paper should appear in block letters, which are recommended at least 2" or 5 cm high. The remaining text should be at least 1" or 2 cm high to be easily legible to viewers who are standing as far as 2 m away.
- Each graph or chart with text should also be readable from 1-2 meters away.
- Use bulleted lists, charts, figures, tables, equations, and photographs as applicable to highlight the important technical content of your work.
- Provide an Introduction or Outline, and Summary or Conclusion. Keep text concise and highlight the key points and significance of your work (use phrases instead of complete sentences).
- The use of color graphics and headline styled phrases in bulleted charts will allow the audience to quickly see the theme of your presentation and grasp your intended message.
- It is also a good idea to sequentially number your posted material or use arrows to indicate flow of material. This will indicate to the viewer a logical progression through your presentation. Simply posting the pages of the written version of your paper can lead to a very poor presentation.
- Push pins and/or tape will be provided to attach your material onto the bulletin boards.
- Your presentation material must be available for viewing and you must be available for discussion during the entire poster session.
